

CHERRIES

HOW CHERRY GROWERS CAN BENEFIT FROM FEEDING SOIL MICROBES

Healthy soil is vital to grow a healthy crop of cherries.

PhycoTerra® soil microbe food invigorates growth of beneficial soil microbes required for optimum soil health.

The vital interaction between beneficial soil microbes and the nutrients available in soil increases the availability of nutrients for crops.

Watch plants respond with improved crop establishment, greater crop uniformity, improved resiliency under stress situations, improved crop quality and yield.

PHYCOTERRA® RECOMMENDATION FOR CHERRIES

Apply PhycoTerra® within or near the root zone at planting to maximize the benefit for the crop.

PhycoTerra® can be tank mixed with standard fertilizers or crop protection products.

It's always best to conduct a jar test with all your tank mix ingredients prior to mixing an entire load.

Shake containers and mix totes well prior to use. In finished tank solutions, maintain constant hydraulic or paddle agitation.

AGRICULTURE

APPLICATION RATES & TIMINGS

- 50% bloom: 3 qts/acre by drip or micro-sprinkler and again 1 week later
- Apply at 2 qts/acre by drip or micro-sprinkler two weeks after bloom applications, then again two weeks later
- Apply a month before fall leaf senescence at 2 qts/acre by drip or micro-sprinkler

PhycoTerra® recommendations based upon past field performance

PhycoTerra® is compatible with CAN17 applied to crop within 24 hours of blending. We highly recommend the application of PhycoTerra® whenever CAN17 is used.
